Microsoft Activation Scripts (MAS)

A Windows and Office activator using HWID / Ohook / KMS38 / Online KMS activation methods, with a focus on open-source code and fewer antivirus detections.

Download / How to use it?

Method 1 - PowerShell (Recommended)

- Right-click on the Windows start menu and select PowerShell or Terminal (Not CMD).
- Copy and paste the code below and press enter

```
irm https://get.activated.win | iex
```

or (deprecated, will be retired on Aug 31 2024, use above instead)

```
irm https://massgrave.dev/get | iex
```

- You will see the activation options. Follow the on-screen instructions.
- That's all.

- On older Windows builds you may need to run the below command before,
  `[Net.ServicePointManager]::SecurityProtocol=[Net.SecurityProtocolType]::Tls12`
- The Powershell method does not work on Windows 7. Use the Method 2 - Traditional instead.
- The URL get.activated.win may be blocked by some DNS services because it is a new domain.

Method 2 - Traditional

- Download the file under the code button from GitHub or Bitbucket
- Right-click on the downloaded zip file and extract
- In the extracted folder, find the folder named `All-In-One-Version`
- Run the file named `MAS_AIO-CRC32_XXXXXXXX.cmd`
- You will see the activation options, follow the on-screen instructions.
- That's all.

To run the scripts in unattended mode, check here

MAS Latest Release

Last Release - v2.6 (20-Apr-2024)
GitHub / Bitbucket

Features

- **HWID (Digital License)** Method to Permanently Activate Windows
